

# Keep your remote workers secure, productive and supported

These days, remote working is “business as usual”. So what does that mean for your technology environment? How can you make sure your employees have the right tools and support to be productive no matter where they’re working?

As a managed IT service provider, we can help answer your questions about remote work: what to do when multiple employees at different locations have technical issues, how to secure workers handling financial data from home, and how to avoid risks to your business overall.

## The remote work reality:

### **MULTIPLE TECHNOLOGY ENVIRONMENTS**

With your team working in different locations, you can have as many sites to manage as you have people—instead of a single office to connect and support.

### **DIFFERENT DEVICES AND CONNECTIONS**

When people work from different locations, they can end up with a wide range of devices, Internet services and speeds, and more.

## What it requires:

### **PROACTIVE MONITORING AND SUPPORT**

Continuous monitoring of employees’ equipment backed by expert support can help keep your distributed team connected and productive.

### **RELIABLE PERFORMANCE**

Whatever your employees are using to work online, you need them to have continuous connectivity, access to dependable support and the ability to pivot fast if challenges arise.

## The remote work reality:

### **ONLINE COLLABORATION**

Employees may not work in the same space, but they still need to work together—online.

### **DIFFERENT KINDS OF RISKS**

Protecting and securing remote workers' devices and data often requires different technologies than you need at the office.

## What it requires:

### **THE RIGHT TOOLS**

Distributed teams need devices and software that make it easy to share and collaborate—and fit the needs of your business.

### **ENHANCED PROTECTION**

From security solutions that defend against attacks at each location to backups that guard against data loss, there are many ways to protect the information your remote employees are working with.

## Find out how we can help your remote team succeed.
